

Jms Multi Sites for Joomla (all editions)

- Add possibility to use the {root} keyword into the browser and geoip logfile.
Also force rebuild the Master index to save the new log file and avoid waiting that a slave site is created or updated to rebuild the index.
- maintenance menu
 - Fix the table prefix present in the "master" or "template" table structure to avoid
 - Fix the code version number detection when several manifest files are present in the same directory.
 - Add verification that hardcoded list of MySQL script directories exists (case of /installation/sql/mysql/ *.sql that might be unavailable).
 - Change the default 1.6 script to be only available when using Joomla 1.5 or 1.6 - No more present by default.

Bundled with Patches definition 1.3.13

- Update JMS "super switch" to avoid setting the default time zone when there is no browser or geoip log file.
Force the test of geo-localisation in lowercase to avoid problem with case sensitivity in the external DBs (maxmind)
 - Add JMS Tools (install) definitions for :
 - Akeeba Subscriptions
 - Update Cobalt for version 8
 - Add Joomla 2.5 sharing definition for:
 - Akeeba Subscriptions
 - Add Joomla 3.1 sharing definition for:
 - Akeeba Subscriptions
