Jms multisite for joomla version 1.3.29

- Improve the assets processing that didn't properly worked on the slave site.
   The uninstall of a component may impacted the master instead of the slave.
   Fixed the DB connection used during the uninstall of the assets.
   Does not stop anymore when an error occurs in the '#__assets' processing but write error in the "error_log" file.
- Improve the Tool / Template installation to allow installing "administrator" template and not only front-end template.
   So now the "#__template_styles" is populated when the "client_id=1" (administrator)
- Fix the uninstall of a template from the JMS Tools.
   The record inside the "#__template_styles" table was not removed due to a MySQL syntax error.
- In the "Maintenance", list the websites in the ascending order and also fix the filtering on a site identifier.

Bundled with Patches definition 1.3.24

- Changed the bugtracker 32702 implementation according to the remarks published on the bugtracker
