

Jms multisite for joomla version 1.3.38 (All editions)

Improve the "maintenance" menu to:

- Fix the MySQL statement that rebuild the sharing of table when the structure of a table is modified.

- Add the detection of the "max_input_vars" to see if the form display could exceed the maximum number of fields in a form allowed by the server.

In this case, display a warning message to let the user know that some limitation may cause the processing of the action partially executed (not all fields received).

The estimated number of fields in the form of the maintenance menu is:

$\text{Nb Sites} * (1 + (\text{Nb extensions per site} * 3))$

For example, a default cPanel/WHM installation has a max_input_vars=1000 that is very small when you have a large number of websites and extensions

Bundled with Patches definition 1.3.34

- Add JMS Tools (install) definitions for :
 - Edocman
 - JEvents RSVP Pro
 - VikBooking
- Add Joomla 3.3 sharing definition for:
 - Edocman
 - VikBooking
