

- Add a basic "cookie domain" computation to allow single sign-in on a subdomain.
- Fix display of the "sharing" tabs when creating a new JMS templates.
It uses now the "master DB" setting to detect if the MySQL views are supported.
- Remove the language translation using the "sitename" to avoid fatal error in language file line 171.

When a ":@" is present in a sitename, this crash the language JText:__() function that interpret the ":@" as a class separator.

- Improve installation of fresh slave site when the hosting server does not follow correctly the symbolic links. Now create an installation directory in which symbolic links are created.

- Add possibility to directly copy the templates folders and also the possibility to create a templates folders based on unzip file.

- Also binded with JMS patches definition v1.2.9 and v1.2.10
