 - Listbingo,
 - Projectfork,
 - RSTickets! Pro,
 - Community Builder Profile Pro + Magic Window,
 - Grid
- Add sharing definition for:
 - Ignite Gallery,
 - Community Builder Profile Pro + Magic Window

Core Enhancement

- Add an internal routine to get the first domain name based on its site id that can be used by mutlisites modules or plugins
- Improve the SEF processing to bypass standard Joomla SEF url error resolution that may affect the website creation from the front-end when SEF is enabled.

The problem is due to the standard Joomla 1.5 SEF processing that does not resolve correctly the URL to their aliases when parameters are present. This may result by using the default processing instead of the action required. In addition, Joomla does not route the normal URL to their process when "non" SEF redirection url are used and that SEF is enabled.
