Joomla 1.6 compatibility

This Jms Multi Sites version add the Joomla 1.6 compatibility in the "tool" menu.

Now it is possible to install,share and uninstall joomla 1.6 extension using the "tool" menu.

It is also bundled with Joomla 1.6 beta 15 installation file.

Add customisation

When a large number of slave site needs to be managed, the time to compare the number of tables that are present in the master with all the slave site DB may be high.

So now, it is possible to disable the "refresh icon" to speed-up refresh of the list of slave site present in the manage site.
 The parameter is MULTISITES_REFRESH_DISABLED and can be in the "multisites.cfg.php" file.

Here it is a sample value:

  define('MULTISITES_REFRESH_DISABLED', true);   // When a large number of slave sites is expected, this allow disable the refresh icon that require to count the number of tables in each slave site.

Bundled with Patch definition 1.2.50

The new patches defined now include:

 - FLEXIaccess,
 - HotelGuide,
 - jShareEasy,

- JV-LinkDirectory,
- JV-LinkExchanger
