Updated the JMS multisite core to:

- Add a new type of parameter to allow retreiving all the domains present in all the slave site.
    This new type is used by the "Multisites Single Sign In for domain" plugin.
- Extends the "multisiteslayout" with the possibility to get layouts from any directories.
- Also make the possibility to access low level API from module or plugins.
- Add the possibility to get "Product Information" when using "Billable website" creation.
- Fix the computation of the complex view when there is a "from" word present in the view to replicate.
    Now search for the " FROM " (with space) to avoid confusion with field 'fromname', 'fromemail' used by acymailing.
- Bundled with Joomla 1.7.3 installation files.

Bundled with Patch definition 1.2.73
