

ENGINE/TYPE=MyISAM problem

Posted by optimica - 2012/11/23 10:43

Hi

I am testing Multisites for my client and found problem with newer MySQL version and creating slave site script. Joomla 1.5 and VM 1.1.

Master and slave database has ENGINE=MyISAM, and when creating slave database older version: TYPE=MyISAM is used by Multisites and cause errors like this:

Create external Table Error query . DB Error: You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near 'TYPE=MyISAM' at line 1
SQL=CREATE TABLE `jat_assignments` (`id` int(11) NOT NULL AUTO_INCREMENT, `access_type` varchar(60) NOT NULL, `access_id` text NOT NULL, `role` varchar(60) NOT NULL, PRIMARY KEY (`id`), KEY `access_type` (`access_type`,`access_id`(60),`role`)) TYPE=MyISAM;

I changed joomla.sql and other .sql from instalation folder, but I can't find where other TYPE=MyISAM entries are. :(

Please help.

MySQL Type=MyISAM is a syntax accepted till MySQL 5.1 and I think that starting with MySQL 5.4, "type" is replaced by "engine".

If you have this error when creating a fresh slave site.

Try using the original "/installation" directory provided in the Joomla 1.5 full package.

Ensure also that your are using a latest Joomla 1.5.26 version where this /installation/sql/mysql/joomla.sql is fixed.

Concering the "#__assignments" table, it seems this is a table of another extension (not a joomla core). So try identifying which extension use this table. This will help you identifying the script that still use the MySQL "TYPE"
