Jms multisite for joomla version 1.3.0 beta 4 fixes several issues identified in the beta 3

Jms multisites All Editions

- Fix the "Set Language" that may result by display "**" arround each label.
- Remove a PHP warning on multisites_patch.cfg-dist
- Fix bug introduced in JMS 1.3.0 concerning compatibility with the "Article Sharing" and the other JMS extension

  Remove the "static" for the JFactory2Win::import() to allow that $this exists. Otherwise it is not defined.

  This generate a "PHP Strict" message that is normal.
- Remove plenty of "PHP Strict" message by adding "static" on function declaration when possible.
- Fix in the "manage site" the "refreshing" of template values and also give the possibility to simply replicate the master when there is no templates at all (case of a light or low-cost edition).

- Revamp the code to prepare a future "light" or "low-cost" edition that will just be able to create fresh slave site and replicate the master.

Jms multisites Full Edition

- Fix front-end layout name computation when there are parameters (case of future Bridge for VM2)
