Joomla 3.0 and Joomla 3.1 compatibility

- Fix the set default language (functions getValue()/setValue() removed in 3.x and replaced by get()/set())
- Fix the FTP setting in the "manage site" and "template" due to getValue()/setValue() remove in J3.x
- Fix Toolbar rendering due to get() function removed from JApplication.
- Fix the front-end slave site edition - JUtility::getToken() removed in 3.x
- Fix several CSS issue to improve the look and make it closer to J1.5 & 2.5
- Add catch of DB throw in case of select of a DB that does not exists.

Jms MultiSites (all editions)

- Add the keywords
  - {site_id-n+}
  The plus after the number allows using all the element =n and higher.
  So a {site_id} = person.city.domain.com with {site_id-3+} = person.city

  - {Site_id} with first character in uppercase
  - {SITE_ID} with the value in uppercase.
- Add a check that the apache "MB String" module is installed when using the Geolocalisation (city).

Bundled with Patches definition 1.3.08

- Fix the JMS Tools (install) definitions for HWDMediaShare
