

Jms Multisite for joomla (all editions)

- Improve JMS Tool to allow installing extension that perform ALTER TABLE on other tables.

Case of the "CW Multi-Cats" that modifies the joomla core "catid" from int to a varchar(254)

- Improve settings menu to process the "{root}" keyword in the multisites path.
- Improve the "set default template" to allow under J2.5 or higher to select a specific template variant when there are several template with the same name.
- During the installation, fix the default setting values in case where the server admin tool (cPanel, Plesk, ...) is not detected.
- Fix some Joomla 3.1.1 compatibility
