Jms Multi Sites (all editions)

Joomla 3.x compatibility

Fix the re-installation of a module or a plugin from the slave site. (Avoid calling the JXMLSimple class that is removed in J3.x)

Installation improvment

The first time that JMS is installed, add the update of all the JMS Templates rule (folder and files) to take in account the currentmaster website directory.
This avoid that the replicMasterXXXX or shareMasterXXXX rule miss some directories when the rules are not reviewed by the user and updated to take in account the current master directory structure.

Bundled with Patches definition 1.3.14

- Add JMS Tools (install) definitions for :
  - Mijoshop / ACL plugin definition
