Jms Multisites for joomla (all editions)

- Add {fromDBName} and {toDBName} keyword resolution in the parseQueries() function to allow creating complex queries during the replication.
- Add an API for the plugin system / Multisites Users to allow process all shared sites instead of specific the exhaustive list manually.
- Add saving of parentSiteId that may help in an affiliate website creation.
- Ensure that the site is not written in the Master Index when the "ignoreMasterIndex" is ON

- Fix a potential Fatal Error on some environment that consists in adding a verification that JError class exists before checking the method_exists.
  This may crash on some PHP environment and generate a 500 "Internal Server Error".
- Fix some PHP Warning and PHP Strict message that might become fatal under PHP 5.4
- Fix the saving of the "root" user
- Fix some Joomla 3.1 compatibility
  - Add try / catch to process the case of invalid DB connection (user/password) and avoid returning a general error.
- Fix Joomla 2.5+ compatibility:
  - Improve delete of a slave site to include the hidden files (.htaccess, ...).

Bundled with Patches definition 1.3.16
