

Jms Multisite for joomla (All Edition)

- add a cross-check in `_isViewSupported()` that DB is an object to avoid PHP fatal error in case where the db would be false.

- Fix joomla 3.2 backward compatibility to allow access some fields that was public in J3.1 and are become protected in J3.2.

This allows some of our other extensions like the "Article Sharing for JMS" to work properly.

We added an API to `getProtected()` the fields

Bundled with Patches definition 1.3.21

Fix bug in Joomla 3.2.0 and reported in bug tracker 32702

http://joomlacode.org/gf/project/joomla/tracker/?action=TrackerItemEdit&tracker_id=8103&tracker_item_id=32702

It allows extensions like the Article Sharing for JMS and others to be available in the menu type. Otherwise they might be unavailable when directories contain the word "view".
