

Jms multisites for joomla (All editions)

- Fix the replication of a website when the new table prefix start with a number.

This will avoid a MySQL statement error that seems to be reported on MySQL 5.5 and not on MySQL 5.1

- Add possibility to display PHP Strict error message when the Joomla debug mode is enabled.

This may avoid hiding a PHP Fatal error message when the PHP Strict error message are ignored.

- Fix the "set default language" that may cause PHP Fatal error on Joomla 3.2

Jms multisite for joomla (Full Edition only)

- Fix joomla 3.2 implementation concerning the sendEmail function that Joomla moved from JUtility into a JFactory::getMailer().

- Add the possibility to add captcha in the website creation from the front-end when it is enabled (new parameter).

By default, it is disabled. Only available on Joomla 2.5 or higher.

- Add cron processing to allow purge expired websites

Template and manage site menu

- Add the keyword {DayOfWeek}, {DayOfMonth}, {monthNbr}, {Month}, {year4}

Template menu

- Remove some PHP Warning that may appears when some fields are not present.

Maintenance menu

- Fix the Joomla 1.6 detection in checkDB
- Add the preprocessing for the fixDB and fixUncheckedDB actions
- Add cleanup of the "lists" of website to process during the checkDB to remove all websites

with wrong DB connection and avoid infinite loop (or no Ajax reply);

- Fix the identification that a field exist in a MySQL Table
- Improve the detection of the "NOT NULL" pattern that may be present in a MySQL field.
- Add plenty of rules for the different version of Joomla and improve the "Legacy mode"
- Add loading of the update/schema information to provide them in the list of choices.

Bundled with Patches definition 1.3.26

- Add JMS Tools (install) definitions for :
 - JSiteMap Pro
 - Meeting Schedule
