

Jms multisite for joomla - All editions

- Fix Joomla 3.3 compatibility when the JMS debug is enabled.
- Improve the detection of the master extension version when re-installing an extension from a slave site and that several manifest file is detected.
In this case, JMS selects the manifest file that has the higher version number.
- Fix a Joomla/aJmooL 1.5 PHP Fatal error when re-installing a plugin from the slave site.
- Improve the maintenance automatic detection in case where extension use a version number composed on more than 3 parts (ie. 1.1.0.0)

Bundled with Patches definition 1.3.37

- Update core multisites to always compute Geo-Localisation even when not used to identify a slave site.

This give the opportunity to thrid parties extensions to use the Geo-Localisation for their processing.

ie. hikainvoices.com use it to determine the customer Geo-Localisation in application of European Tax rules 2015 (MOSS)

It also converts the MaxMind region code into region name to help in MOSS tax state matching.

- Update Joomla 2.5, 3.1, 3.2, 3.3 sharing definition for:
 - Hikashop to add the filtering on the order when the Site ID is present
