Jms multisite for joomla version 1.3.47 - All Editions

In the JMS Template, add the possibility to edit the action on the "index.php" and "index2.php" when creating a new rule.
By default, those files remain "read only" in default JMS Template rules or previous rules created in JMS 1.3.46 or below.
Becarefull that once copied, if you upgrade/migrate your joomla version, you will have to re-copy the "index.php" & "index2.php" manually in case where you don't use the "Special redirection"

Also improve the compatiblity with Joomla 3.4. Fix the manifest files name to ensure that it is always in lowercase without spaces.

Bundled with Patches definition 1.3.43

- Add JMS Tools (install) definitions for :
  - EasyJobs
