

Jms multisite for joomla version 1.3.63 - All Editions

- Add Joomla 3.4+ compatibility to let the normal processing doing the install (or update) when the parameter 'Ignore Version' is enabled in JMS.
- Add Joomla 3.5+ compatibility relative to the saving of parameters in some "multisites extensions" like the "Article Sharing".
- Fix a PHP fatal error that can occurs when a call to the API that provide the list of template is called from a plugin like the SSI For domains.
Ensure that the "DS" is defined to avoid PHP fatal error

Bundled with Patches definition 1.3.58

- Improve the "multisites switcher" that make the CLI working like "localhost" and allow adding the "_host_" parameter when executing a CLI program
ie. Syntax is :
`php /home/account/public_html/cli/finder_indexer.php _host_=http://slave.com`
- Add JMS Tools (install) definitions for :
 - Layer Slider
 - SP Page Builder
 - vData
