Enhance the sharing table parsing when creating a website.

When creating a slave site, it may happen that some existing view contain additional statement like "select ..... from `dbname`.`tablename` WITH CASCADED CHECK OPTION'.
To retreive the retreiving "FROM table name" present in a statement we add a cross-check that select the word that is preceded with the word "from".

Bundled with Patch Definition 1.2.31.

Add JMS Tools (install) definitions for :

- Add and fix DOCMan 1.5.4 modules and plugins,
- ARI Quiz,
- Vodes,
- Jobs

Add sharing definition for:

- Vodes,
- Jobs
