Partial compatibility with Joomla 1.6 beta 10

We added the Joomla 1.6 beta 10 original file and in particular its new installation directory that is required to create fresh slave sites.

Bundled with Jms Multi Sites Patches definition 1.2.44

Kunena 1.6 renames its tables names. The new patch defined the new "#__kunena%" tables name as synonym of the old "#__fb%" table names.
If you want to install Kunena 1.6, this patches definition is required.

- Add JMS Tools (install) definitions for :
