Improve compatibility with Joomla 1.6 in Jms Multisites.

It now contains the filtering for the "installation/uninstall" processing in a slave site to avoid removing the PHP code of the extension uninstalled or re-install an extension with a different version than the one installed via the master website.

Fix some menu language file to display menu correctly.

Both Joomla 1.5 and 1.6

Add a verification that a DB does not exists when creating a DB dynamically.
In some case, Joomla can return a DB object that has no ressource connected to any DB.
The new check, verify that the DB Oject returned by joomla contain a real MySQL DB ressource.

Bundled with Patch definition 1.2.53
