Jms Multi Site version 1.2.96

- Add in the front-end the possibility to extend the existing "views" to create new layout. Case of the "bulk" website creation layout.
- Enhance the "site" element rendering to allow replacing the combo-box by a "text" field or "hidden" field in aim to hide the full list of slave site in the "Article Sharing", ... or any extensions that give the "site" parameter in the "menu item" management.

  A new "multisites.cfg.php" parameter allows providing the rendering constrain for the rendering.
- Fix bug when creating MySQL Users dynamically. Avoid a fatal error.
- Remove PHP Strict message. Added some "static" to functions. Require PHP 5 as a minimum.

Bundled with Patches definition 1.2.90

- Add JMS Tools (install) definitions for :
  - YooRecipe!
