

This JMS multisite Patch Definition 1.2.30 adds the "install" definitions for :

- DOCMan 1.5.4 modules and plugins,
- Mutlisites Meta tag,
- CEdit,
- Click Head,
- JReviews & S2Framework. Nnot guaranteed as it uses ioncube and tests were not possible

You must consider this definition as experimental and require new fresh slave site or slave site built with JMS 1.2.23 kernel only.

It is not possible to use JReviews on slave sites created with prior JMS version 1.2.23. The update is not working.

With existing slave site, you may have to modify the secret word manually in the configuration.php file.
