# Errors after installing latest version of multisit

Posted by energetica - 2012/03/26 07:57

---

I am getting an error after installing multisite.

" Failed loading XML file C:wampwwwjoomlaadministratorcomponentscom_multisitesmultisites.xml
XML: failed to load external entity "file:///C:/wamp/www/joomla/administrator/components/com_multisites/multisites.xml"

"

I am testing it in my local server (wamp). I have the latest version of Joomla 2.5 installed and the latest version of multisite. Is there any extra steps we need to do to fix this? It will be a great help if you may provide a simple solution. Thanks in advance.

_____

Verify that you don't have a limitation on the upload file size.
By default PHP is configure to have the upload size = 2M and as JMS multisite has a size of 4.6MB, this may result by this kind of error.

In this case, as you are on your localhost, you can probably modify the maximum size defined in the php.ini or use the alternate procedure to install JMS from a directory.
See tutorial video 3
http://tutorial.jms2win.com/joomla/multisite-12x/cpanel/install-from-directory
