Determine site_id in PHP?

Posted by meteu336 - 2009/06/15 02:12

Is is possible (without parsing the baseurl) to determine the site_id from within the PHP code?

Like if I want to have custom CSS styles even though each slave has the same theme

YES.

The site id is saved iin MULTISITES_ID define.
When this is a slave, the MULTISITES_ID is defined.
When not defined, this is the master website.
