

Determine site_id in PHP?

Posted by meteu336 - 2009/06/15 02:12

Is it possible (without parsing the baseurl) to determine the site_id from within the PHP code?

Like if I want to have custom CSS styles even though each slave has the same theme

YES.

The site id is saved in MULTISITES_ID define.

When this is a slave, the MULTISITES_ID is defined.

When not defined, this is the master website.
