Add On Domain Problem

Posted by australian - 2009/02/05 21:56

Hi All,
I have a problem when i go and try set up my slave sites.
I have installed the componant and have created a slave site in the manage site section of the master site.
When i go into the cpanel of the master site to enter the add on domain details i get the following error message.

Error from park wrapper: mydomain.com is owned by another user.

Anyone got any ideas ?

Thanks
Peter

Is this domain is your domain and managed by same CPanel account ?
If yes, contact your hosting provider to ask him support.
If this domain is managed by another CPanel account, perhaps you have to modify it with the other CPanel account

For CPanel, I suggest you ask to the support of your hosting provider.

Hi australian,

How did you get on with this please as I have the same problem?

Cheers

Hi Adrian,

I had put this project to this side, but i hate being beaten so im gunna have another go.

If you are using cpanel, all i did was make SUB DOMAINS instead of ADD ON DOMAINS.
Worked for me, so i didnt solve the problem, i just worked around it.

Regards
Peter

Edwin,

Check your emails.

Peter

Have you follow the procedure as described in FAQ http://www.jms2win.com/faq#sec-58

If you want to deploy website into a specific directory, you can also use the following procedure

Create a slave site into JMS
enter a site identifier (ie demo1)
Enter a domain. ie http://domain.com
Enter deploy directory = {site_dir}

Go in CPanel and create AddOn domain
Enter a new domain name = domain.com
Document Root = public_html/multisites/demo1

Ok Got It thanks.

Also if i install multisites componant in mydomain.coml/master
but my slave sites are slave1.mydomain.com etc
is this a problem
