Why am I getting this????

Posted by richard - 2009/02/12 15:25

I followed the video, settings say " Unix Symbolic Links: Allowed "
But know matter what i do I get this???

JFTP::connect: Could not connect to host "xxxxxxxxx.com" on port 21
JFTP::connect: Could not connect to host "xxxxxxxxx.com" on port 21
JFTP::connect: Could not connect to host "xxxxxxxxx.com" on port 21

This is because you are using the FTP layer configured with Joomla.
See the Joomla Global Configuration / Server settings.

Ok....turned ftp off and now I get this?

JFolder::create: Could not create directory
Unable to create the Site ID directory:

Also.....?????

With FTP turned off, I can not create a template.....says template created but nothing is there??????

Turned FTP back on and created the template and it then worked ????

what am I suppose to do here????????????

Try to check the permission of the /multisites directory and /multisites/xxx directory to increase them and give chmod 777.

If symbolic link can not be created, this is generally due to a problem of permission.
This also explain why you have enabled FTP to try bypass this permission problem.

If you don't arrive to give permission, the only solution will be to NOT use the deploy directory feature.
