Problem with "Check for updates"

Posted by jmfavre - 2008/12/20 22:39

The menu " Multi site > Check for updates " leads to a page entitled "check patch installations".

But just after I've got two errors:

Unable to decompress data
Error while deploying the patches update

then the following text (just FYI).

Joomla Multi Sites version: 1.1.4
Patches definition version: 1.1.2
Files Status
administrator/includes/defines.php
OK
includes/defines.php
OK
includes/defines_multisites.php
OK
includes/multisites.php
OK
installation
OK
installation/includes/defines.php
OK
installation/installer/helper.php
OK
installation/installer/jajax.php
OK
xmlrpc/includes/defines.php
OK
configuration.php
OK
administrator/components/com_config/controllers/application.php
OK
administrator/components/com_templates/admin.templates.html.php
OK
administrator/components/com_templates/controller.php
OK
libraries/joomla/document/html/html.php
OK
libraries/joomla/filesystem/folder.php
OK
administrator/components/com_comprofiler/library/cb/cb.installer.php
OK
administrator/components/com_docman/docman.class.php
OK
administrator/components/com_jce/installer/installer.php

OK

This is probably the symptom that the file "zip" received is corrupted and can not be deployed.
Perhaps there is a communication problem that has corrupted the file.
FYI, the JMS 1.1.4 contain the latest "patch definition" available for the moment.
