Pre-sale Q:
Posted by TonyR - 2009/04/09 02:36

Hi, I'm impressed with your script. I'm wondering if it is compatible with smartsite? img of link attached.

Please let me know. Also, I'm confused: is JMS compatible with CB and/or Jomsocial or not? I see conflicting posts in your forum. Thanks. And congratulations on your good work.

Concerning Community Builder, YES, JMS is compatible as have mentionned in our product detail. We distribute a specific patch for this extensin (CB 1.2).
See also the testimonial of a customer that have published the extension he is using
http://www.jms2win.com/forum?func=view&id=486&catid=19

Concerninng JoomSocial, I don't.
Perhaps you will have a reply from a customer that use it.
In general, I am informed when an extension does not work and not when it works.
As I have not received any negative feedback for JoomSocial, I assume it works.

Hi, thanks for the quick reply. Do you know if JMS is compatible with Smartsites?
http://www.smartsite.su/

Please let me know.

I don't know.
If you want to send me this extension by email, I will test it.
In general, the extension can be installed without problem.
You have to check if it saves its configuration in a file on disk or in the DB.
When the configuration is saved on the disk, this mean that the configuration will be common to all the

slave sites. This may required a patch to make it specific to each slave site.

The preliminary test of smartsite extension shows that the configuration is saved in the DB.
Therefore it will be specific to each websites.
We have also installed the extension with success on a master and a slave sites.

So we think that this extension works correctly under JMS.
