Joomla 1.5.11 compatible
Posted by maxvanessen - 2009/06/03 09:43

Hi,

Today the Joomla developers released a new version of Joomla (1.5.11). Have you tested Multi Sites with this new release?

I am currently testing the Joomla 1.5.11.
I can already tells you that modification does not really concern JMS.
I have just found 2 files of the update that are patched by JMS.
The first one is the administrator/components/com_config/controllers/application.php where Joomla has removed a warning message and that does not affect JMS patch.
The second is a file present in the Joomla installation and where the have remove 2 lines that does not affect JMS patches.

I am preparing a JMS 1.1.22 that will include the original Joomla 1.5.11 that may be used by JMS in case of un-install and when the backup of the original files are not present. In other words in very rare cases.

Personnally, I have installed the Joomla fixes 1.5.10 to 1.5.11 with success.
Once installed, you will see that Joomla detect one file restore and that must be patched.
It will apply the patch on this new Joomla 1.5.11 file to benefit of the security fixe.

YES it is compatible.

If I have a good memory, the update from J1.5.11 to J1.5.12 restore 3 files that require to be patched again by JMS.
The patches will be applied on the J1.5.12 to benefit of the security fixes.

I have already checked it.
