Can I shared template with JAT3 framework??

Posted by helmuntdavid - 2012/05/28 17:33

Hi all,

Let me know if you can have slaves sites sharing the plugin "Jat3 framework", and how to do to create a common template for all sites?

Regards and thank you

First you can share the plugin.

Second, sharing the templates between the websites depends on the joomla version and also the JMS templates rule that you have defined.

Verify that you have shared the "/templates" directory. This is defined in the JMS template rule / "templates" action = "special copy"

When working with Joomla 1.6 or higher, you may potential have to discover the template to let joomla declare it into the DB.
Under Joomla 1.5, the templates is automatically detected by joomla.
