Multisite and Multicategories (with JMS2Win)

Posted by Alaink - 2012/08/01 16:28

Hi,
Just one question ;
We write articles for publishing on slave sites depending selected category with JMS2Win MultiSite Content Modules.

We need to classify these articles (by example for a citytrip article: Destination, possible Transportations, Accomodations, ...)

Is it possible to multicategorize each article for easier search purpose for our web visitors ?

So we probably need a external component but to work with JMS2Win multisites content?
Recommanded component or plug-in advices are welcome :)

Thanks

I don't know how to achieve that now.

All I can tell you is that I will notice that you would like to have such feature in the "Multisites Content Module" that only exists for Joomla 1.5.

As I still have to rewrite something for Joomla 2.5 or soon 3.0, I will have a look at that moment.

Provide filtering of categories inside the "Multisites Latest Modules" does not seems easy as the categories are not necessary the same in all the websites.

So a list of all the categories for all the websites should be provided to let you select the categories in which you would like to restrict the "multisites latest articles".
