Problems after Install JMS Multisites

Posted by caliderumba - 2013/05/30 20:55

I'm having this issue after install the JMS Multisites:

Failed loading XML file
/home2/calideru/public_html/administrator/components/com_multisites/multisites.xml

I'm using Joomla! 2.5.11 and the 1.2.97 version of JMS

Any help please?

Thanks

You have to upgrade to JMS 1.3

The crash is due to a regression bug introduced by Joomla in the version 2.5.10.

If you want to use JMS on J2.5.10 or higher, you need JMS 1.3

See the JMS 1.3.x change history and the joomla bug tracker 30206
https://www.jms2win.com/en/faq/change-history-13x
http://joomlacode.org/gf/project/joomla/tracker/?action=TrackerItemEdit&tracker_item_id=30206

This is "red Component" that modified the install and created the issue.

Another alternative is that you rollback to Joomla 2.5.9
