sharing of components.
Posted by KingoftheRoad - 2009/07/24 09:27

Hi Edwin,

In JMS1.2, is it possible to share the content of the components only?

For example, in sharing of Virtuemart, each slave site can only see it's own users, but can see and sell all products?

Many thanks.

Seth

YES, this is only possible with VirtueMart.

With VirtueMart, you can decide to only share the ViruteMart users or share all the VirtueMart (including the catalog,, ...)

See User Manual page 32

Hi Edwin,

Sorry, you may misunderstand my question.

My question is to share the "content" only but "not" to share the users. Is that possible?

Thanks.

Seth

If you want to share ALL VirtueMart except the Users, the answer is NO.

Trying to do that will create inconstency.

When you will be in a website and see for example an order (that will be shared), it will be attached to a user for example id 123 that mean client A in site A, and perhaps client B in site B or event the user could not exist in a specific website.

Trying to do such request seem completly impossible and present a very high risk of inconsistency.

Share everything or nothing or simply the user as described in the user manual.
