What is The Current trend in CMS

Posted by nazar2k2 - 2009/07/31 07:16

_____

wordpress vs drupal vs joomla...
Joomla is current Trend.
I know that this is not really anything new to a lot of people that have been using joomla as a CMS only.Joomla CMS has better security and can be build with good quality

Joomla and Drupal are two magnificent Open Source Content Management System which provide the framework to develop effortless with various ready to us modules and website in short span of time.

Main differences are as under

1. Drupal use smarty template where as on the other hand Joomla dose not

2. Joomla uses plugin and modules whereas Drupl has module only

3. In drupal php code can be written directly whereas in Joomla you need to install plugin for php support

Thanks

==========
