

Cannot save template

Posted by tomppa - 2009/11/11 17:54

Hi Edwin,

for some reason I cannot create a new website template.

I've filled in all needed parameters and when I push the Save button I'm tossed to the front page of administration and nothing is saved.

Is it a permission thing or has it got to do with Joomla 1.5.14

Tom

Dear Tom,

The JMS templates data are save in the /multisites directory.

So if you are not able to save the JMS templates, you can check the permission of the /multisites directory and its config_templates.php file.

Perhaps there is another permission or security issue somewhere.

Are you working on a windows platform ? If yes, you have to check the security permission.

On unix, try to use the FTP layer.
