JMS, multisite for joomla - Joomla Multiple Sites and user sharing

Generated: 13 December, 2025, 05:29 Cannot save template Posted by tomppa - 2009/11/11 17:54 Hi Edwin, for some reason I cannot create a new website template. I've filled in all needed parameters and when I push the Save button I'm tossed to the front page of administration and nothing is saved. Is it a permission thing or has it got to do with Joomla 1.5.14 Tom Re:Cannot save template Posted by edwin2win - 2009/11/11 18:39 Dear Tom, The JMS templates data are save in the /multisites directory. So if you are not able to save the JMS templates, you can check the permission of the /multisites directory and its config_templates.php file. Re:Cannot save template Posted by tomppa - 2009/11/12 08:38 It's 777 ______ Re:Cannot save template Posted by edwin2win - 2009/11/12 09:15 Perhaps there is another permission or security issue somewhere. Are you working on a windows platform? If yes, you have to check the security permission. On unix, try to use the FTP layer.
