JMS, multisite for joomla - Joomla Multiple Sites and user sharing Generated: 3 September, 2025, 06:36

Cannot save template Posted by tomppa - 2009/11/11 17:54
Hi Edwin,
for some reason I cannot create a new website template. I've filled in all needed parameters and when I push the Save button I'm tossed to the front page of administration and nothing is saved.
Is it a permission thing or has it got to do with Joomla 1.5.14
Tom

Dear Tom,
The JMS templates data are save in the /multisites directory. So if you are not able to save the JMS templates, you can check the permission of the /multisites directory and its config_templates.php file.

lt's 777
Re:Cannot save template Posted by edwin2win - 2009/11/12 09:15
Perhaps there is another permission or security issue somewhere. Are you working on a windows platform ? If yes, you have to check the security permission.
On unix, try to use the FTP layer.
