Article Sharing - show on slave frontpage

Posted by sq1solutions - 2009/12/11 15:36

Is it possible to show the Multi Sites Category Blog Layout directly on the frontpage of the slave?

At the moment we have a link NEWS but we want it to be visible directly on the frontpage.

Regards,
Marco

YES.
In joomla, you create a menu item like "home" and you where you select the menu type "multisite article". There you select the category blog.

Select the "home" menu item as default.

The "Article Sharing for JMS" is a component.
This is not a module.
So it is not possible to put it in a module position "user1"
