Maste Site - blank adminstrator page

Posted by sq1solutions - 2010/03/04 14:19

Hi,
Currelty having a strange issue on my master page. I can login in a normal but after that I receive a blank page. This is only on the master site when I go to a slave site I can work with the control panel?

Other thing is I can open http://localhost/administrator/index.php?option=com_seminar&task=2 but I don't have any menu to save my changes??

Anyone know what needs to be done to fix this?

Blank page, as you could read it several times in the forum is the symptom of a PHP syntax error somewhere.
Check if you have a "error_log" file in the "administrator" directory.
Perhaps it will help you identify the file that has a syntax error.

Build the site from scratch on a other server and copied only the tables that are used from the master site and voilla backend is up running again. So lesson learn again backup backup backup :laugh:
