Shared Banner Advertising Component?

Posted by Zappu - 2010/03/27 16:14

Does anybody have an idea if there is a component for banner or generell advertising available which works also together with Multisites in a full shared modus?

If not, is there any plan to apply this to any of the available components, Edwin, like WeBuddha wbAdvert (http://extensions.joomla.org/extensions/ads-a-affiliates/banner-management/5621)

Concerning the banner, I don't know if AdsManager could help you.

Concerning the WB Advert, a quick review show that we can NOT share it.
They are connected to the menu, section and categories of the current website.
As the section and categories can not be share, we can not share this extension.

We will just define it in a next release of the JMS patches definition to allow its installation with the JMS tool menu.
