replicate components and modules without data
Posted by rosen4o - 2010/04/01 09:02

_____

Is it possible to replicate components like community builder but without to replicate the users which are in community builder database?

_____

YES.
You just have to create a Fresh Slave site that contain a "template website" pre-installed with Community Builder and without any user except the administrator.
After that you can replicate this website as many times as you want.

_____

Can I make copy of a existing website which is with installed modules and after that I can delete all users and data which I doesn't want. Then I can copy this template site.

_____

exact.
This is the idea behind the "templates of websites"
