shared users
Posted by JylesM - 2010/05/21 02:45

Ive looked in the documention and couldnt find it, but where do i go to enable to share the users from the orginal Joomla, with the rest of the sites?

just to mention, when i went through your tutorial, it poped up with the shared, after you selected the subsite, well mine doesnt pop up when i do that.

If you dont have the JMS Template "share" tabs then this mean that you have not selected any website to replicate (no need to share anything to replicate) or that you don't use MySQL 5.0 or higher.
See the "Setting" to check that you are using MySQL 5.0.

_____

Try to create a prototype the follow exactly the tutorial video 16
http://www.jms2win.com/tutorial#jms12x-16

that use exactly the same values.
That will help you understand the concept.

Share the user is an operation that is performed when you clone a website site.
At this moment you copy the "from" template website into a "to" new slave site where some MySQL tables are shared.
This rule is defined in the Jms Templates.

You also have a technical video that present plenty of things.
Perhaps it will help you
