Unable to manage templates

Posted by AnyWay - 2010/06/05 23:59

I don't know if it was like this before.

Today i upgraded to the lastest version and now i'm getting this, when i click MANAGE TEMPLATE!

I get a menu and not the templates, on both master and slave site! Why?
How to manage templates? Thank you very much.

The fix is available in the patch definition 1.2.37 and included in a new JMS multisites 1.2.31
