I can not access the master site administrator.

Posted by nachog - 2010/06/15 21:44

I have a JMS installed and have created two slave sites, I access them without problems to the administrator, but the Master site I can not access the administrator. slave sites are created with symbolic links and share with the master site users.

I can do to access the administration of the master site.

Thanks.

Español:

tengo instalado JMS y he creado dos sitios esclavos, a ellos accedo sin problemas al administrador, pero en el sitio Maestro no puedo acceder al administrador. los sitios esclavos estan creados con symbolic links y comparten usuarios con el sitio maestro.

Que puedo hacer para acceder a la administracion del sitio maestro.

When you create slave site, they are independent.
This is normal that you don't see the admin of the slave site from the master.

The only facility added by JMS is the tool menu that allow install and manage a limited number of extension.

You have to go in the back-end of each slave site to manage them.
