Admin Panel - Check for updates

Posted by ademirel - 2010/06/22 10:00

Hello;

I'am getting the following error when I click check for updates from the admin panel:

SERVER_CONNECT_FAILED, failed to open stream: Connection refused

What can be the problem?

Thanks..

I am also getting the same error when trying to check for updates. SERVER_CONNECT_FAILED, failed to open stream: no suitable wrapper could be found

Check that you have CURL php module active in your server or that your server authorize to perform open URL from script (this latest option might be disabled by the hosting provider)

If your server can not perform call outside, you have the alternate solution to get the latest version from our website as explained in the faq.
