Templates creation

Posted by yoosite - 2010/08/10 12:33

_____

Hi,

I have a "pilot" site from which users can create their own sites from the front-end. I would like create some jms templates taking for models some other existing already sites. Please understand that the “pilot” site is not the master. Masters could be any other existing sites and already installed...

Considering this, what is the best way method to create the templates ?

Thanks,
Eric.
