Remove multisites from website

Posted by pixelplaza - 2010/08/16 02:35

Multisites seems to conflict with fabric and wont let me edit fabrik. I would like to remove multisites from my website. Is there a uninstall procedure to restore my site to what it was before installing multisites.

Thanks in advance

Which version of Fabrik are you using ?
Lastest we have reviewed was the 1.0 & 2.0rc3

When you un-install the patches, JMS restore the original files that we present before you install the patches.

As mentioned during the installation of JMS Multisites, the backup is saved in the directory /administrator/components/com_multisites/backupXXXXXX
