template to copy all files from master site

Posted by trm001 - 2010/08/17 11:52

Hi Edwin

I have another problem, I can create new slave sites creating symbolic links for key folders like images etc but when i come to create a new template to basically copy/duplicate all files and folders i get the following error;

-1- an error has occured - copy failed

I guess that it is the settings i have used, can you have a look at the doc attached and see if you can spot the action to copy the file/folder that could be causing this problem.

Hope this makes sense.

Rgds
Jamie

If you have an error in the copy, you perhaps have to check the permission of something like that.
This is a Joomla (not JMS) error message reported when you call the process to copy a folder.
Unfortunatelly, Joomla does not provide any way to have more info on the reason.
So you have to look in the directory and try imagine what could cause the reason or try add traces in Joomla itself to debug the copy.
Perhaps the copy is using the FTP and you have provided a wrong FTP login and password
